

University Vision and Action Plan for Sustainable Development Goals

No Poverty – End poverty in all its forms everywhere

1. Relevance and Significance

Sustainable Development Goal 1 (SDG 1) aims to eradicate extreme poverty globally by 2030, defined as living on less than \$2.15 per day. This goal is crucial as poverty is intrinsically linked to various other challenges, including hunger, poor health, limited education, and social discrimination. Addressing poverty is fundamental to achieving equitable and sustainable development. Deen Dayal Upadhyaya Gorakhpur University (DDUGU) recognizes the importance of this goal and endeavors to contribute through education, research, and community engagement.

2. Sustainable Practices

DDUGU engages in skill development, vocational training, and entrepreneurship promotion through incubation centers and startup support. It offers scholarships and financial aid to economically disadvantaged students and runs outreach programs for marginalized communities. Partnerships with industry and government bodies enhance job placements and real-world training. The university also supports Self-Help Groups (SHGs) and community programs that promote financial literacy and social empowerment. These efforts reflect DDUGU's commitment to SDG 1: No Poverty, through education, skills, and inclusive growth.

3. Policies and Guidelines

DDUGU supports these efforts by integrating skill development, entrepreneurship, and social empowerment into its academic programs. It also promotes a scholarship / Financial Support Policy for Students and a Policy for International Relations and Support to enhance inclusivity and global opportunities.

4. Outcomes

DDUGU contributes to such outcomes by integrating poverty alleviation efforts into its academic and research activities, fostering student engagement, and collaborating with stakeholders to address local economic challenges.

5. Future Roadmap

To advance SDG 1, Deen Dayal Upadhyaya Gorakhpur University can take strategic steps such as integrating poverty and sustainable development topics into academic curricula to inspire student-driven solutions. Strengthening ties with local organizations and launching targeted poverty reduction programs can boost community impact. Research on regional poverty trends can support evidence-based policymaking, while effective monitoring and evaluation systems will ensure accountability. Through these initiatives, DDUGU can make a meaningful contribution to poverty eradication at both regional and national levels.
